# CONNECTIVITY GUIDE

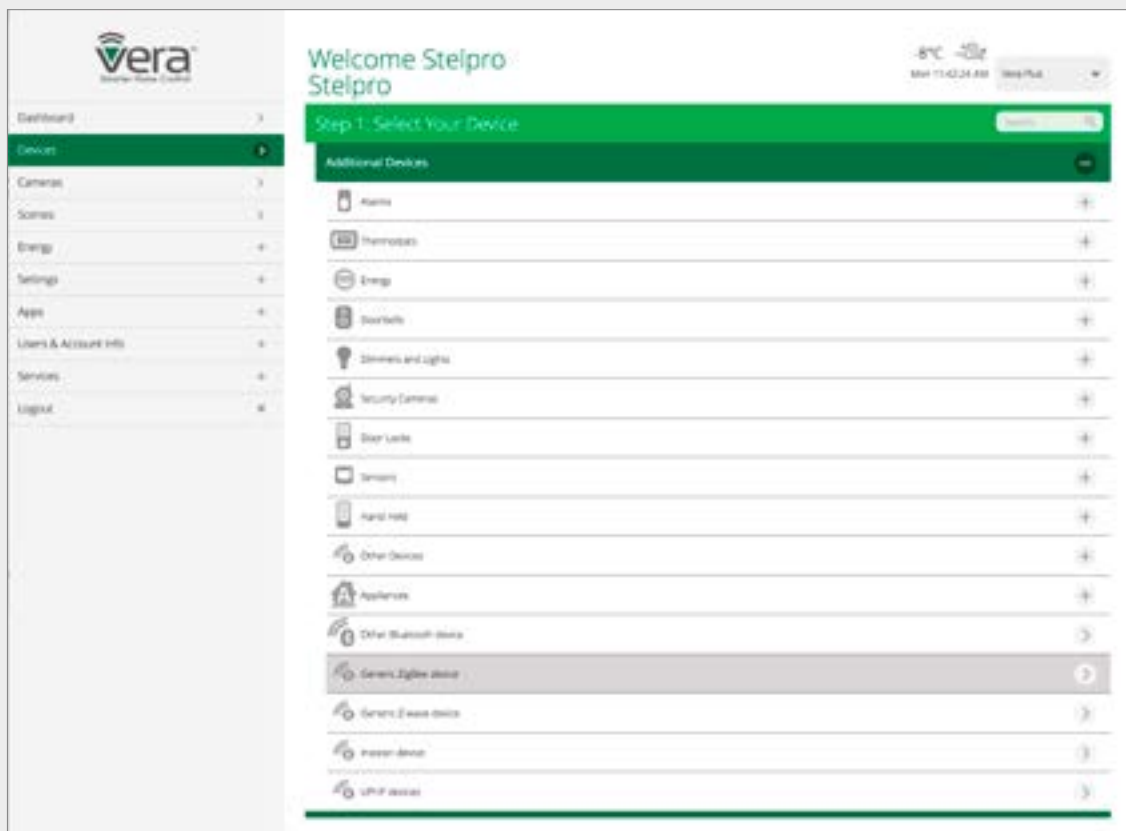

Access your “Get Vera” account from the [getvera.com](https://getvera.com) site, and follow these steps:

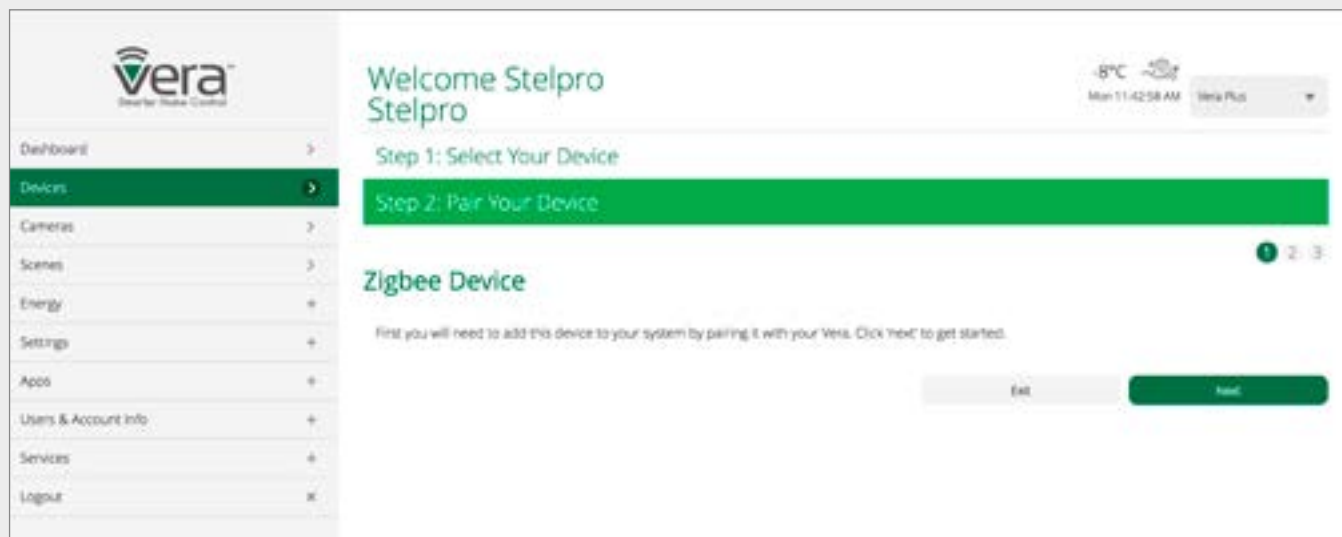

- 1 From the left-hand menu, click on the “Devices” tab and select “Add Device”.

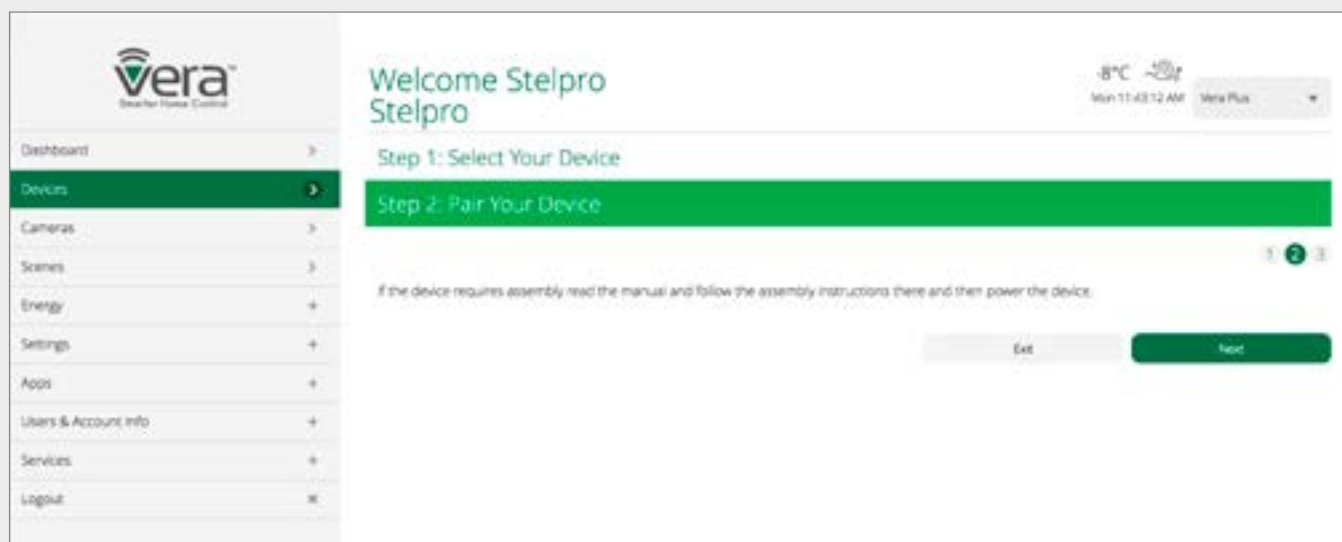

- 2 From the “Select your device” list, choose “Generic ZigBee device”.

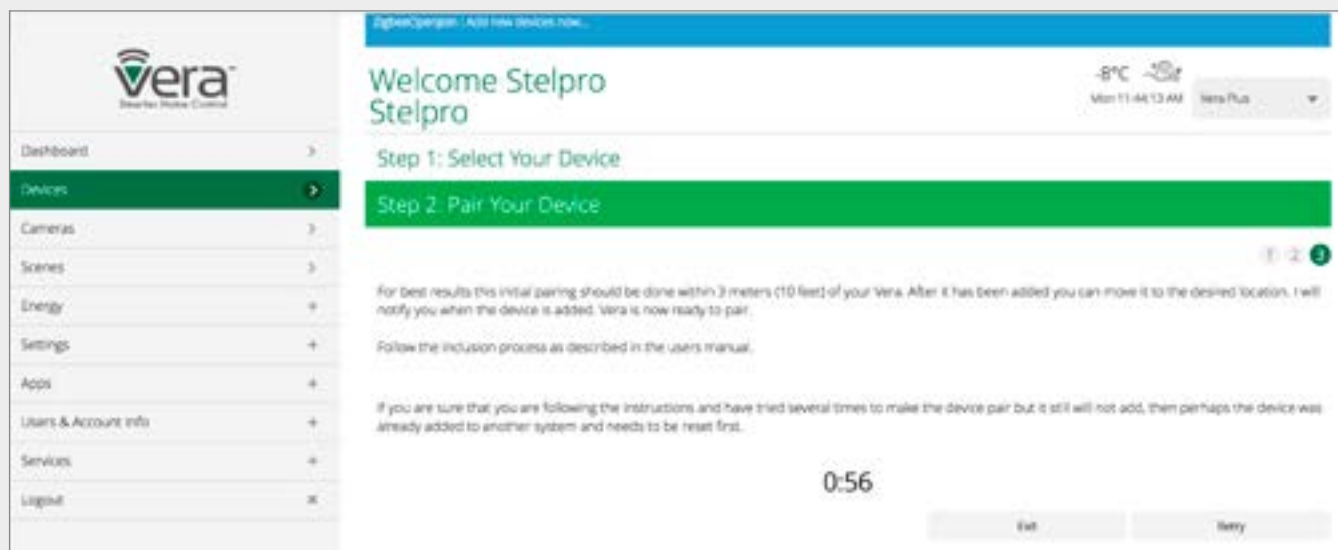

3 Click on “Next”.

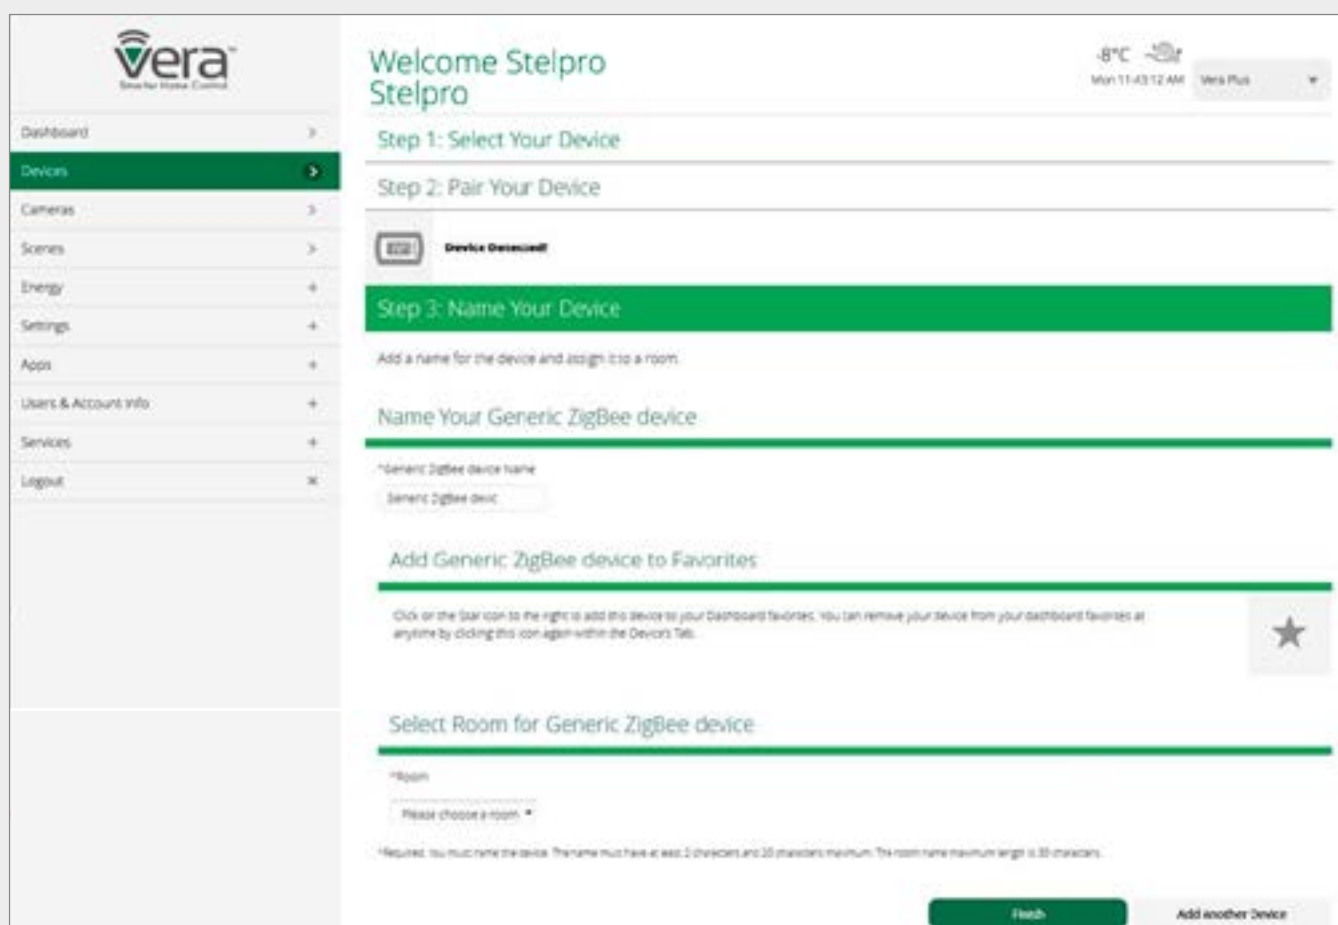

4 Click on “Next” again.

- 5 When the countdown starts, pair your ZigBee thermostat by choosing “On” from the thermostat’s first menu.

- 6 Your thermostat is now connected to your Vera Plus hub. Name the device. You can also add the device to your favourites and assign it to a specific room (optional). Once you are done, click on “Finish”.

- 7 It will take a few seconds for Vera Plus to configure the device. Then, it will appear on the “Devices” page.
